Business case in a page

Less time writing, more time inspecting, and findings to education establishments sooner. A template for inspectorates, regulators and education bodies that run quality reviews. Complete the table with your own figures and paste the paragraphs into your submission.

Executive summary

1. **The need.** Report writing takes inspector time away from inspection and delays findings reaching the education establishments reviewed.
2. **The change.** EDUINSPECT360 drafts each report from the evidence inspectors capture, and inspectors review, edit and approve every section.
3. **The days.** At 1,000 inspections a year, the planning range is 900 to 1,567 inspector days a year freed for inspection.
4. **The speed.** Reports reach education establishments 7.2 to 10.8 working days sooner, from a planning baseline of 38 working days from visit to published report.[1]
5. **The control.** Judgements stay with inspectors, every AI action is logged, and the next step is a 45-minute briefing and a pilot scoped to your framework.

Cost benefit table (GBP)

Volume and time figures show our planning assumptions for 1,000 inspections a year. Replace them with your own figures. Value figures use a day cost of £335, the England published team inspector rate, as an example. Replace it with your own. Enter your costs from your quote. Calculate your figures at eduinspect360.com/roi.html.

Item	Conservative	Expected	Basis
BENEFITS PER YEAR			
Inspector days freed for inspection	900	1,567	Writing and review time saved
Extra inspections possible, same team	142	247	Days freed ÷ inspector days per inspection
Working days sooner to published results	7.2	10.8	Drafting window compressed
Value of inspector time freed	307,200	534,333	Days × your day cost
COSTS IN YEAR 1			
Platform subscription	0	0	From your quote
Implementation and configuration	0	0	From your quote
Training and change support	0	0	From your quote
Internal project time	0	0	Your estimate
Total costs, year 1	**£0**	**£0**	**Sum of costs**
Net benefit, year 1	**£307,200**	**£534,333**	**Value of time freed less total costs**

Only direct inspector report writing and quality assurance time is counted. Travel, overheads, school side time and the value of earlier publication are not included. The value is inspector time freed for inspection work, not a staffing reduction.

Choose how to use the capacity. [Organisation] will use the freed days for: more inspections, deeper inspections, faster publication, or a lower cost per inspection.

Copy into your submission

Strategic need
[Organisation] completes 1,000 inspections a year. Each ends with a written report, and that writing time is inspector time not spent inspecting. [Organisation]'s own target is [X] working days from the end of an inspection. Published targets elsewhere run from 30 to 50 working days (Northern Ireland 30, England 38, Wales 45, Scotland 10 working weeks),[1] and research published by the FDA in January 2026 reports that 98% of HM Inspectors work beyond their contracted hours.[2] [Organisation] needs to put more inspector time into inspection and get findings to education establishments sooner, without weakening professional judgement.

Value for money
On planning assumptions that [Organisation] can replace with its own timesheet data, the platform frees 900 to 1,567 inspector days a year for inspection. That is 142 to 247 extra inspections with the same team, or the same number of inspections with deeper inspection time, results published sooner, or a lower cost per inspection. The time is valued at £307,200 to £534,333 a year at a day cost of £335. Only direct report writing and quality assurance time is counted. As one published reference, England pays a contracted team inspector £335 a day and a quality assurance day £392.[3] Use your own day cost. Costs are set out in the table above.

Delivery
EDUINSPECT360 is configured to [Organisation]'s own inspection framework, grading scale and report structure, so a framework change is a configuration change and not a redevelopment project. Delivery starts with a 45-minute briefing against the framework, followed by a pilot scoped to a defined set of inspections, with benefits measured against [Organisation]'s own baseline.

Assurance
A named inspector reviews and approves every AI drafted section before it affects any outcome, and judgements remain the inspector's. Every AI action is written to an append-only audit log. Data is segregated per client and [Organisation] decides where it is hosted. This is consistent with the human oversight principle Ofsted publishes for its own use of AI.[4] EDUINSPECT360 is aligned to ISO 27001, SOC 2 Type II, Cyber Essentials Plus and WCAG 2.1 AA.

2. FDA, news release on research into HM Inspectors working beyond their contracted hours, 22 January 2026: 98 per cent work beyond their contracted hours.
3. Ofsted, Payments for contracted Ofsted inspectors, GOV.UK, updated 26 June 2025: £335 a day for a team inspector and £392 a day for quality assurance, covering an average of 3 inspection outputs.
4. Ofsted, Ofsted's use of AI, GOV.UK, updated 21 October 2025: meaningful human control of AI processes and appropriate human oversight.

Saving shares are EDUINSPECT360 planning assumptions: conservative 40% of writing time, 30% of review time and 40% of the drafting window, expected 70%, 50% and 60%, reflecting drafting moving from days to hours. Both cases can be replaced with your own pilot data. The full method is at eduinspect360.com/roi.html.
